

iShop

Your friendly new
shopping assistant

iShop

A small guide for educators and clinicians

For many, being able to shop is an expression of independence and choice, brings a sense of joy, and is a form of community inclusion.

For teens and adults with intellectual disabilities particularly, shopping is a common and important activity. However, it is also a complex and demanding task that incorporates a broad set of skills that include handling money, mathematical calculations, following social cues, interacting with others, ignoring distractors, and more.

iShop is designed as a tool for people seeking independence or wanting to contribute more to their households while shopping.

The app

iShop is an app that takes the users through 3 stages

Stage 1

Wallet

Stage 2

Shopping Cart

Stage 3

Payment

Your Wallet

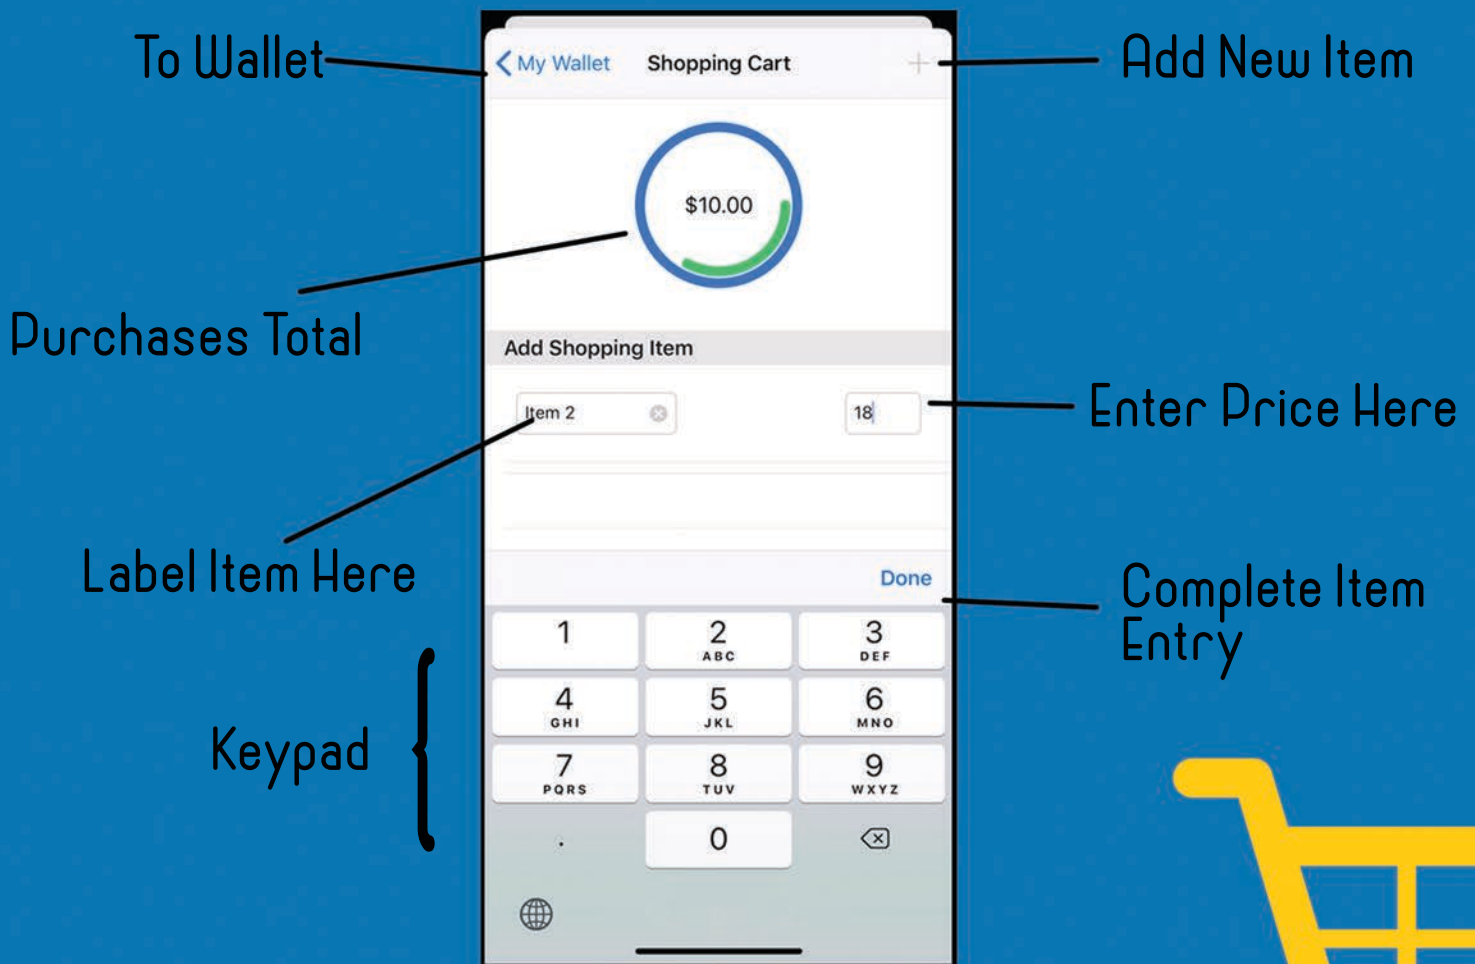

Before going to the store, users can match the money in their wallet to pictures on the screen. They select what coins and bills they have, populating a virtual wallet.

Your Shopping Cart

2

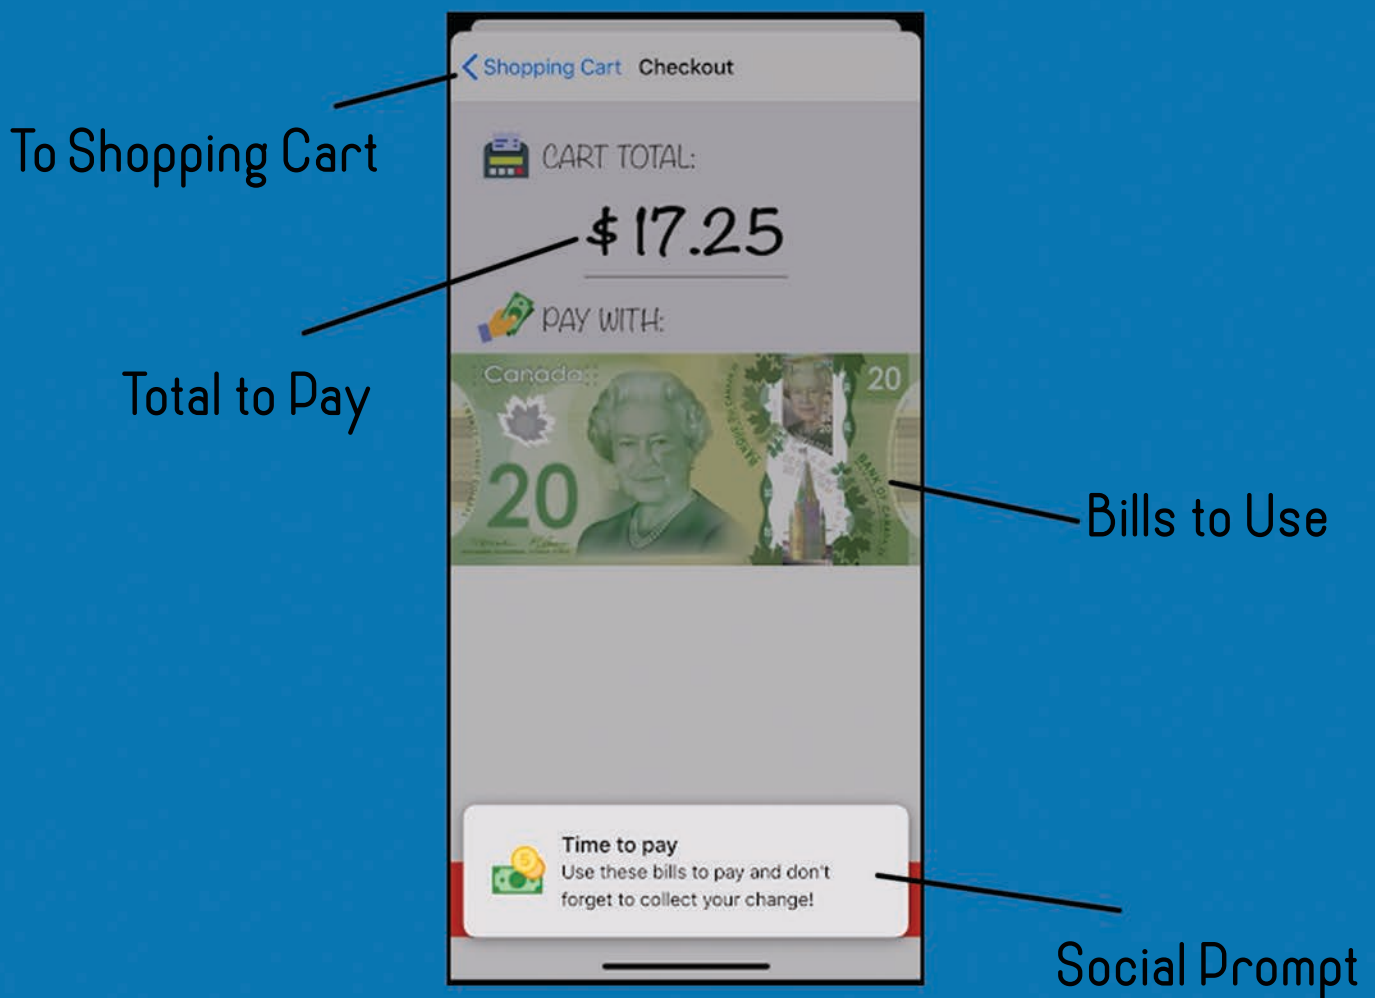

When at the store, users enter the prices of every item they put in their cart. iShop accounts for tax and tracks how many purchases can be made before the user runs out of money.

3

Your Payment

iShop determines which bills are needed to pay for all items, displaying each one on the screen.

What personal abilities does iShop support?

Math Skills

Knowing The Value of Money

Determining If You Have Enough Money to Buy Something

Social Prompting within the Shopping Process/Schema

Using parts within the app can be a useful educational tool for teens and adults, also.

iShop is free of charge, with no in-app purchases or subscription fees. It also does not collect any user information. Please see our terms and conditions and our data use policy.

iShop is available on the Apple store.

iShop was created in partnership with École Le Sommet/Summit School.
